

JACOB MEUSER

Software Engineer

Redding, CA | jakemsr@yahoo.com | 541-525-7375 | LinkedIn | GitHub | Portfolio

SUMMARY

Software engineer with experience spanning systems programming, open-source development, and modern web applications. Former official OpenBSD committer with substantial experience in C, Unix systems, device drivers, and hardware/software integration. Recently completed full-stack development training and coursework in C++, Java, SQL, and statistics, complementing systems-level experience with current JavaScript and TypeScript development.

TECHNICAL SKILLS

Languages: C, C++, Java, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frameworks & Web: React, Next.js, Redux, Node.js, Tailwind CSS, REST APIs

Data & Backend: Firebase, MongoDB, PostgreSQL, Better Auth

Tools & Environments: Git, GitHub, Unix, Vercel, Vite, GitHub Copilot

EXPERIENCE

OpenBSD Project - Distributed / Remote

Jun 2006 - Sep 2011

Developer / Official Committer (Open Source)

- **Contributed 800+ kernel-level C commits** as an official OpenBSD committer, developing hardware support and device drivers across the audio and USB subsystems.
- Collaborated with Theo de Raadt on the design of suspend/resume support for the audio and USB subsystems, contributing subsystem expertise and leading implementation across audio and USB drivers.
- Standardized USB device-detach procedures and resolved driver and abstraction-layer bugs uncovered during the work, eliminating kernel hangs and crashes on affected devices; fixes were validated through user reports, including on hardware unavailable for local testing.
- Developed Intel High Definition Audio driver functionality in C, including recursive traversal of audio widget connection paths to map hardware signal routing.
- Co-developed sndio, OpenBSD's replacement audio API; resolved subsystem and driver bugs to ensure reliable full-duplex operation and ported numerous third-party applications to the new API, helping validate its design and establish the application ecosystem needed for broader adoption.

Self-Employed

Mar 2005 - Present

Independent Artist & Business Owner

- Built and operated an independent business for 20+ years, working directly with clients to define requirements, solve problems, manage concurrent projects, and deliver custom work on deadline.

SOFTWARE PROJECTS

Skintrinsic | Live Demo | GitHub | *React, TypeScript, REST APIs*

- Built a responsive application from Figma designs that accepts webcam captures or uploaded images and integrates REST APIs to return AI-driven skincare analysis.

Movie Finder | Live Demo | GitHub | *React, TypeScript*

- Engineered a responsive movie-search application integrating a third-party API, with dynamic routing, asynchronous loading states, and individual detail pages.

Dev Events | Live Demo | GitHub | *React, Next.js, Better Auth*

- Built a responsive application for discovering and sharing developer events, implementing authentication and authorized event creation through a REST API.

EDUCATION & RECENT COURSEWORK

FES Institute

Feb 2026 - Jul 2026

Certificate, Full-Stack Web Development

Shasta College - Redding, CA

Aug 2025 - Dec 2025

Relevant Coursework: C++, Java, SQL, Statistics
