

Jacob Meuser

Frontend Software Engineer | React | TypeScript | Next.js | JavaScript

jakemsr@yahoo.com | 541-525-7375 | Redding, CA | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Software engineer with a background spanning low-level systems programming and modern frontend development. Former official OpenBSD committer with over 800 kernel-level C commits, now building responsive, user-facing applications in React, TypeScript, and Next.js. Hands-on experience integrating REST APIs, managing client-side state, and shipping deployed projects. Brings the debugging rigour and code-review discipline of open-source systems work to clean and maintainable interfaces.

Technical Skills

Languages & Web: TypeScript, JavaScript (ES6+), HTML5, CSS3, SQL, C, C++

Frameworks & Libraries: React, Next.js, Redux, Tailwind CSS, REST APIs

Backend & Data: Node.js, Firebase, MongoDB, PostgreSQL, Better Auth

Tools & Testing: Git, GitHub, Vercel, Vite, GitHub Copilot

Professional Experience

OpenBSD Project (Distributed / Remote) Jun 2006 - Sep 2011 *Kernel Developer (Open Source)*

- Contributed over 800 kernel-level C commits as an official OpenBSD committer, developing hardware support and device drivers across the USB and audio subsystems.
- Designed and implemented suspend and resume support for the audio and USB stacks in collaboration with project maintainers, including Theo de Raadt.
- Co-developed sndio, a new audio API adopted across kernel and userland to replace the previous interface.
- Diagnosed and resolved low-level hardware, driver, and kernel issues across multiple architectures through systematic debugging and long-term code review.

Self-Employed Mar 2005 - Present *Independent Artist & Business Owner*

- Ran an independent business for over 20 years, working directly with clients to define requirements and deliver custom projects on deadline while managing multiple concurrent engagements.

Projects

Skintrinsic | [Live Demo](#) | [GitHub](#)

- React, TypeScript, REST APIs: built a responsive web app from Figma designs where users capture webcam selfies or upload photos to receive AI-driven skincare analysis returned from RESTful APIs.

Movie Finder | [Live Demo](#) | [GitHub](#)

- React, TypeScript: engineered a responsive movie search platform integrating a third-party API with dynamic routing, loading states, and individual detail pages.

Summarist | [Live Demo](#) | [GitHub](#)

- React, Next.js: built an app for reading and listening to book summaries, fetching structured data from a remote API with handled loading and error states.

Education

FES Institute Feb 2026 - Jul 2026 *Certificate, Full-Stack Web Development*
