<https://jakemsr.dev/>

Software engineer with experience ranging from low-level systems development to modern full-stack web applications. Former committer in the OpenBSD project, working on hardware support, device drivers, and USB/audio subsystem development in C. Recently completed intensive training in full-stack web development and have built multiple projects using React, TypeScript, Firebase, and related technologies. Bringing both deep technical foundations and 20 years of experience running a successful self-employed business.

Professional Experience

[OpenBSD Project](#)

[June 2006-September 2011](#)

Kernel developer (Open Source)

- Contributed kernel-level C code as an official OpenBSD committer with well over 800 commits.
- Developed hardware support and device drivers, with a focus on the USB and audio subsystems.
- Collaborated with Theo de Raadt and other core developers to design and implement suspend/resume support for the audio and USB stacks.
- Investigated and resolved low-level hardware compatibility, driver, and kernel issues across multiple architectures.
- Collaborated with Alexandre Ratchov to develop a new audio API, sndio, to replace existing API across kernel and userland.
- Participated in code review, debugging, and long-term maintenance within a large, collaborative open-source operating system.

[Self-Employed Artist/Business Owner](#)

[March 2005-Present](#)

Independent business

- Managed all aspects of a successful self-employed business for 20+ years.
- Worked directly with clients to define requirements and deliver custom projects.
- Managed multiple concurrent projects while meeting deadlines and maintaining client relationships.

Projects (personal)

Search API Project: <https://movie-finder-sigma-two.vercel.app/> | <https://github.com/jakemsr/movie-finder>

Created a fully functional search platform for movies

- Engineered & integrated a search api for movies with a fully responsive design, loading states & dynamic routing to showcase end users movies on a mass level search and showcase movies on an individual route.

AI Skincare Project: <https://skintrinsic.vercel.app/> | <https://github.com/jakemsr/skintrinsic>

Developed a front-end for AI assisted skincare

- Given Figma designs, developed a fully responsive website where users either take selfies with their webcam or upload existing pictures of themselves and receive analyses of user skincare concerns via RESTful APIs.

Technical Skills

Programming Languages: TypeScript, JavaScript, HTML, CSS, C, C++, Java, SQL

Frameworks: React, TailwindCSS, Firebase, NextJS, Redux, Better Auth, MongoDB, REST APIs

Tools & Other platforms: Vercel, Cloudflare Worker, GitHub, Vite, VsCode, GitHub Copilot, Jest, Stripe

Education

FES Institute | [Certificate](#)

[February 2026 - July 2026](#)

Other

Interests: I enjoy hiking, biking and resistance training.
